

H. AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

Claim 1 (currently amended): A tongue depressor for receipt within a mouth of a patient during an examination, comprising:

a blade comprising first and second sides separated by a thickness of said blade, said blade further comprising first and second tongue contact portions located along said first and second sides, respectively with said blade having a rounded profile on a first and second end; and

an ornamental image appearing along at least a portion of at least said first tongue contact portion of said first side;

wherein said tongue depressor is a non-infant, youthful patient's standard size and shape for use with a self-illuminating tongue depressor handle attachment, said tongue depressor is not coated with flavor, and any portion of said tongue depressor blade may be received within said mouth of said patient during said examination, even if said any portion of said tongue depressor has said ornamental image appearing therealong.

Claim 2 (original): A tongue depressor as recited in claim 1, said ornamental image appearing along both said first tongue contact portion and said second tongue contact portion of said blade.

Claim 3 (original): A tongue depressor as recited in claim 1, further comprising

another ornamental image appearing along at least a portion of at least said second tongue contact portion of said blade, wherein even a portion of said tongue depressor blade bearing said another ornamental image may be received into said mouth of said patient.

Claim 4 (original): A tongue depressor as recited in claim 3, wherein said ornamental image and said another ornamental image are the same.

Claim 5 (original): A tongue depressor as recited in claim 3, wherein said ornamental image and said another ornamental image are different.

Claim 6 (previously presented): A tongue depressor as recited in claim 3, wherein said ornamental image and said another ornamental image are made of non-toxic ink for application to items to be received within a person's mouth.

Claim 7 (cancelled).

Claim 8 (original): A tongue depressor as recited in claim 1, wherein said tongue depressor is made of wood.

Claim 9 (original): A tongue depressor as recited in claim 1, wherein said tongue depressor is made of plastic.

Claim 10 (original): A tongue depressor as recited in claim 1, wherein said

tongue depressor is made of cardboard.

Claim 11 (original): A tongue depressor as recited in claim 1, wherein said tongue depressor is sterile.

Claim 12 (currently amended): An apparatus for motivating the cooperation of youthful patients in oral examinations, comprising a non-infant, youthful patient's standard size and shape tongue depressor for use with a self-illuminating tongue depressor handle attachment for restraining a tongue of a patient to allow clearer examination of a rear of a patient's mouth and throat, comprising a blade having two elongated, substantially flat surfaces for restraining said tongue of said patient, at least one of said two surfaces bearing an ornamental image along at least a portion thereof intended to be inserted into said patient's mouth, with said blade having a rounded profile on a first and second end, said ornamental image being made from non-toxic ink, and any portion of said tongue depressor blade may be received within said mouth of said patient during said examination, even if said any portion of said tongue depressor has said ornamental image appearing therealong.

Claim 13 (previously presented): A tongue depressor as recited in claim 1, wherein said ornamental image substantially covers the entire surface of said blade.

Claim 14 (previously presented): A tongue depressor as recited in claim 1, wherein said ornamental image include designs that appeal to children.

Claim 15 (previously presented): A tongue depressor as recited in claim 1, wherein said image consists of at least two colors.

Claim 16 (previously presented): A tongue depressor as recited in claim 3, wherein said ornamental image and said another ornamental image contain designs with repeating patterns from end to end of said blade.

Claim 17 (currently amended): A tongue depressor for receipt within a mouth of a patient during an examination, comprising:

a blade comprising first and second sides separated by a thickness of said blade, said blade further comprising first and second tongue contact portions located along said first and second sides, respectively with said blade having a rounded profile on a first and second end; and

an ornamental image appearing along at least a portion of at least said first tongue contact portion of said first side;

wherein said ornamental image substantially covers the entire surface of said blade, said ornamental image include designs that appeal to children, said image consists of at least two colors, said tongue depressor is a non-infant, youthful patient's standard size and shape for use with a self-illuminating tongue depressor handle attachment, and any portion of said tongue depressor blade may be received within said mouth of said patient during said examination, even if said any portion of said tongue depressor has said ornamental image appearing therealong.

Claim 18 (currently amended): A blade like object suitable for children to use and

enjoy outside the medical environment, comprising a non-infant, youthful patient's standard size and shape blade for use with a self-illuminating tongue depressor handle attachment, the blade having two elongated, substantially flat surfaces, with said blade having a rounded profile on a first and second end, at least one of said two surfaces bearing an ornamental image along substantially the entire surface thereof, said ornamental image being made from non-toxic ink,

wherein said ornamental image include child-oriented designs that appeal to children, said ornamental image consists of at least two colors, said blade is not coated with flavor, and both ends of said blade may be received within the mouth of said children.
